

Everett Bolton

+1(334) 796-2525 | Atlanta, GA | eebmagic@gmail.com | github.com/eebmagic | linkedin.com/in/everett-bolton

EDUCATION

Georgia Institute of Technology

Bachelor of Science, Computer Science

Jun 2019 — May 2023

Atlanta, GA

- Dean's List
- Thread Concentrations: Intelligence & Media

WORK EXPERIENCE

Software Engineer

May 2023 — Present

Intential

Atlanta, GA

- Design and build production features across full-stack Node.js and Go codebase for an enterprise low-code network automation platform
- Balance greenfield development with maintaining critical legacy applications and expanding features
- Architected a horizontally scalable connection management system handling distributed state across server nodes, supporting high-throughput enterprise-scale environments
- Led architecture migration of legacy application to improve support for horizontal scaling with shared state, enhancing system reliability and performance while maintaining backward compatibility
- Built flexible Docker-based integration testing framework across multiple products, reducing deployment risk and accelerating development
- Prototyped ML-powered product features on Labs team:
 - embedding-based device grouping and anomaly detection for device configuration changes
 - workflow task recommendation system for low-code canvas

Linguistics Research Assistant

Jan 2021 — May 2023

Professor Leila Glass (at Georgia Tech)

Atlanta, GA

- Interviewed and recorded study participants
- Data processing to quantify accents and speech habits of study participants
- Measured patterns across accent expression and political orientation
- Collaborated with a large multidisciplinary team

Software Engineering Co-op

Jun 2021 — Dec 2022

Intential

Atlanta, GA

- Prototyped an NLP system to infer ruleset trees across network device configs
- Rapidly delivered features to resolve urgent client needs, preventing production issues and enabling critical deployments
- Enhanced production adapters to add features, improve efficiency/reliability, and support new services
- Migrated React components by implementing designs from internal UX team and resolving upgrade issues

PROJECTS

Spotify-Vis

Mar 2025 — Present

- Integrated the Spotify API in a Go server to pull user playlists and album art
- Implemented a force reaction algorithm to minimize art overlap while maintaining density
- Displayed album art in a React UI based on a calculated principal color
- Cached computed color values to maximize performance and minimize redundant image requests

eBay Dashboard (github.com/eebmagic/foi-ebay-dashboard)

Dec 2024 — Present

- Built a web application integrating eBay's API to streamline data export and insights for a nonprofit book seller
- Improved data presentation for multi-order shipment tracking and repeat buyers, reducing manual tracking overhead
- Deployed as a free service to support local library fundraising operations

SKILLS

- **Programming Languages:** Python, JavaScript, Golang
- **Technologies:** Node.js, Docker, React, MongoDB, Redis
