EDUCATION

Georgia Institute of Technology

Bachelor of Science, Computer Science

Jun 2019 — May 2023

Atlanta, GA

- Dean's List
- Threads: Intelligence & Media

WORK EXPERIENCE

Software Engineer

May 2023 — Present

Itential

Atlanta, GA

- Design and build production features across full-stack Node.js and Go codebase for an enterprise low-code network automation platform
- Balance greenfield development with maintaining critical legacy applications and expanding features
- Architected a horizontally scalable connection management system handling distributed state across server nodes, supporting high-throughput enterprise-scale environments
- Led architecture migration of legacy application to improve support for horizontal scaling with shared state, enhancing system reliability and performance while maintaining backward compatibility
- Built flexible Docker-based integration testing framework across multiple products, reducing deployment risk and accelerating development velocity in a rapidly scaling engineering organization
- Prototyped ML-powered product features on Labs team:
 - embedding-based device grouping and anomaly detection for device configuration changes
 - workflow task recommendation system for low-code canvas

Linguistics Research Assistant

Jan 2021 — May 2023

Professor Leila Glass (at Georgia Tech)

Atlanta, GA

- Interviewed and recorded study participants
- Data processing to quantify accents and speech habits of study participants
- Measured patterns across accent expression and political orientation
- Collaborated with a large multidisciplinary team

Software Engineering Co-op

Jun 2021 — Dec 2022

Itential

Atlanta, GA

- Prototyped machine learning and NLP systems for new product features with TensorFlow and PyTorch
- Contributed to supported adapters to add features and improve efficiency/reliability
- Created new adapters for services such as MongoDB and BlueCat
- Migrated React components by implementing designs from internal UX team
- Handled client feature requests to accommodate urgent needs

PROJECTS

Spotify-Vis

2025 — Present

- Integrated the Spotify API in a Go server to pull user playlists and album art
- Displayed album art in a React UI based on a calculated primary color
- Cached computed color values to maximize performance and minimize redundant image requests

Wordle Solver (eebmagic.github.io/wordle-recs)

Spring 2022

- Used a RegEx process to determine the set of remaining words from a Wordle board, ranked by corpus frequency
- Forked a TypeScript frontend for an existing Wordle clone

SKILLS

- **Programming Languages:** Python, JavaScript, Golang
- **Technologies:** Node.js, Docker, React, MongoDB, Redis
