

Everett Bolton

+1(334) 796-2525 | Atlanta, GA | eebmagic@gmail.com | github.com/eebmagic | linkedin.com/in/everett-bolton

EDUCATION

Georgia Institute of Technology

Bachelor of Science, Computer Science

Jun 2019 — May 2023

Atlanta, GA

- Dean's List
- Relevant Coursework: Computer Vision, Computer Graphics, Machine Learning, Natural Language Processing

WORK EXPERIENCE

Software Engineer

May 2023 — Present

Itential

Atlanta, GA

- Designed and built new features across full-stack Node.js and Go codebase for an enterprise low-code network automation platform
- Architected a high-throughput, horizontally scalable connection management system handling distributed state across server nodes, reducing runtime by 38%
- Led architecture migration of legacy application to improve support for horizontal scaling with shared state, enhancing system reliability and performance while maintaining backward compatibility
- Built flexible Docker-based integration testing framework across several applications, reducing deployment risk and accelerating development
- Prototyped ML-powered product features on a Research and Development team:
 - embedding-based device grouping and anomaly detection for device configuration changes
 - workflow task recommendation system for low-code canvas

Linguistics Research Assistant

Jan 2021 — May 2023

Professor Leila Glass (Georgia Tech Linguistics)

Atlanta, GA

- Used linear regression modeling and z-score normalization to quantify southern accent expression
- Measured patterns across accent expression and political orientation survey responses
- Collaborated with a multidisciplinary team
- Interviewed and recorded study participants

Software Engineering Co-op

Jun 2021 — Dec 2022

Itential

Atlanta, GA

- Prototyped an NLP system to infer document groupings and ruleset templates for network device configs
 - Combined Jaccard similarity with custom embeddings (PyTorch and TensorFlow)
- Rapidly delivered features to resolve urgent client needs, preventing production issues and enabling critical deployments
- Enhanced production adapters to add features, improve efficiency/reliability, and support new services
- Upgraded React components by implementing designs from UX team and resolving migration issues

PROJECTS

Desk Time Dashboard (eebmagic.github.io/roboflow-desk-time)

Jan 2026

- Created a Roboflow Workflow to process several thousand images from an apartment camera
- Used a Roboflow object detection model and Gemini model to detect presence and computer usage
- Built a Chart.js dashboard visualizing daily desk time patterns and animated spatial movement throughout the apartment
- Reduced workflow runs by 39% using pixel variance analysis to filter low-information nighttime images

eBay Dashboard (github.com/eebmagic/fol-ebay-dashboard)

Dec 2024

- Built a web application integrating eBay's API to streamline data export and insights for a nonprofit book seller
- Improved data presentation for multi-order shipment tracking and repeat buyers, reducing manual tracking overhead
- Deployed as a free service to support local library fundraising operations

SKILLS

- **Programming Languages:** Python, JavaScript, Golang
- **Technologies:** Node.js, Docker, React, MongoDB, Redis, PyTorch, TensorFlow
